Need to come up with template or demo of flexible, user powered query, where user selects what s/he wants to query by.

CHANGE THIS BUG and remove "DEMO" from Summary when time to really connect all the wires. 1-2 hours should be spent on this now, and later the rest of wiring connected.

#4 - 01/10/2005 02:41 PM - Michael Lee

these less critical, though still needed soon

#5 - 04/01/2005 05:37 PM - Michael Lee

prototype for this is done. IT uses the current advanced query and a series of parameters to show or hide the elements according to user's wishes. Because they are only hidden, the query itself can still access the fields and doesn't cause weird errors that way.
