We are not loading any plots (that we know of) that are confidential, so this can wait a bit (not long, though)

Not sure what rules PI's need to provide. It seems that we need to test the current abilities of the system - location fuzzed and the plot perhaps completely embargoed. -- or location embargoed. Anything else that needs testing?

location fuzzed
plot embargoed
That should be sufficient for now

XML now exports all data in vegbank. Authentication for viewing plots and downloading the data handled elsewhere.

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
