History

#1 - 01/08/2003 09:16 PM - John Harris

No idea what this is?

#2 - 01/14/2003 02:47 PM - Michael Lee

According to a Bob Email:

This is the capability to query the database via an [http://vegbank.org/...](http://vegbank.org/) like string from a browser. I believe this bug depned on Lee and Peet indicating the critical fields to return. The bug may be in our court at the moment.

#3 - 01/14/2003 02:52 PM - Michael Lee

This bug depends on the simple plot view (bug 863) -- this form should be sufficient for the results of the URL. The only other thing needed would be connecting the URL to the query engine so that someone writes a paper and embeds a hyperlink in their Paper:

"I sampled several plots and the only interesting one was Green River #5 Click Here to view the plot in VegBank's plot archive!"

Allow a simple url to query an single plot
www.vegbank.org/vegbank/showPlot?accession=VB1232.11Jan2003

The accession number is
a) "Vegbank instance"
b) pk,
c) the date the plot was viewed.

There is a plan in the distant future to have several vegbanks so the intail two char code does this.
The pk is straightforward
The date the plot was viewed is important as we want vegbank to be like a publication, so on can see what the data looked like on an exact date in the past. (means rolling back changes made since the date before displaying the plot).

The following url does the job now....

[/vegbank/servlet/DataRequestServlet?requestDataFormatType=html&clientType=browser&requestDataType=vegPlot&resultType=summary&queryT](http://vegbank/servlet/DataRequestServlet?requestDataFormatType=html&clientType=browser&requestDataType=vegPlot&resultType=summary&queryT)

ype=simple&plotId=125

#6 - 08/22/2003 03:07 PM - P. Anderson

Users now have the ability to query plots using a simple URL that takes one of the two following forms.

<http://beta.nceas.ucsb.edu/plot/VB125.13jan2003>
<http://beta.nceas.ucsb.edu/plot/125>

The number 125 in these examples is the PK (primary key) in the plots table. Currently the VegBank instance, VB, and the date, 13jan2003, are ignored. For this reason I made it so that a user simply needs to enter PK as in the second example.

Note that the resultant page takes some time to generate. Also please note that plot ID 125's dominant stratum is broad leaf herbaceous, my personal favorite.

#7 - 11/09/2003 05:04 PM - Gabriel Farrell

I confirm fix.

#8 - 01/31/2005 02:53 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
