Description			
<p>Need a pre-canned query that displays the logged-in user's data sets in a browsable list. This browsable datasets list should be the default query tab. The display should work like a filesystem browser, allowing the user to group datasets into collections ala the SRB browser. It should be extremely intuitive for the user to browser through their own datasets. Local and remote datasets should be dispalyed in the same list, with some visual indication of where the information is stored (local, network, or both).</p>

History

#1 - 04/09/2001 06:10 PM - Matt Jones

this feature is related to the redesign of the top-level container and the query component.

#2 - 05/22/2001 01:29 PM - Matt Jones

Same functionality requested and prived by bug 164. This is fixed, and is a duplicate.
