<b>Description</b>			
<p>When a metadata file is uploaded to the network (using INSERT), it is assigned a new accession number if the provided accession number is null or already used. Need to add facility to dmanclient for managing local cache of ID numbers (borrow code from xmitodb), assigning those accession numbers to metadata documents, uploading the document to the network using a unique id number, and syncing the accession number with the meta_file_id field in the documents. If a new accession number is returned (ie, the proped id wasn't usingue), an update should automatically be performed to sync the meta_file_id. Also, if data is uploaded simultaneously, need a mechanism to sync the data accession number with content of the metadata documents.</p>

## History

### #1 - 08/24/2000 12:17 PM - Matt Jones

Increased the target milestone for this bug, as it is an extremely ijimportant feature of the client's operation. It is related to fixing bug [#81](#) too.

### #2 - 09/15/2000 02:15 PM - Dan Higgins

Code has been changed for the client to add accession numbers to documents that have been successfully inserted to the database. (It is assumed that change by Bojilova to the servlet to insert numbers there is installed -- i.e client does not resubmit documents after inserting accession numbers.) New dialog for insertion also added.
