

VegBank - Bug #920

add accession codes for concepts / parties

12/02/2002 09:59 PM - Michael Lee

Description			
<p>We should think about adding codes for a quicker, more accurate way of referencing closed list items. i.e. "Interfluve" for "interfluve (crest, summit, high place in the crags)", etc.</p> <p>Additionally, and slightly differently, we might consider developing similar handles for people to reference VegBank plant concepts, comm concepts, parties, soil taxa, cover methods, stratum methods, references, citations, user defined values, named places, strata, plant/comm parties. These could be similar to the Accession number for the plot/obs so that one could uniquely reference the different elements from outside VegBank, or in a distributed VegBank.</p>

Blocked by VegBank - Bug #870: New XML export and import into the VegBank system		Resolved	11/13/2002

History

#1 - 10/02/2003 11:41 AM - Michael Lee

For November, we need to add codes to XML stream for import into VegBank. This applies ONLY for plant/comm concepts that were downloaded directly from VegBank, which assures that the PK's are correct. Later we will also do this for references and parties, perhaps other things too.

#2 - 10/13/2003 04:02 PM - Michael Lee

they have been added to db_model.xml and part of altering SQL which needs to be run against the database.

#3 - 01/31/2005 02:54 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
