Target version:	1.0.0beta1	Spent time:	0.00 hour
Bugzilla-Id:	928		

Description

There are severla fields in Vegbank that have a rules for what constitutes valid data. For example, picklists of valid entries for a data field (bug 791).

This will be implimented as a validation layer that checks inputs before going to the database. Upon failure the user will returned a report of the problem.

This bug addresses parts of bug 791, bug 729, bug 725 and bug 741.

History

#1 - 01/08/2003 01:20 PM - John Harris

It has been decided that this validation layer must be implemented before the 1.0.0 release, so that inconsistent data are not loaded to the system.

#2 - 01/10/2003 03:45 PM - John Harris

This works on the test system -- still need a modified constraints list and a constraints map.

#3 - 01/31/2005 02:54 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.

#4 - 03/27/2013 02:15 PM - Redmine Admin

Original Bugzilla ID was 928
