### Description

currently monarch is getting pipelines from metacat but it gets the steps from a
directory on the filesystem.  that needs to be changed

## History

**#1 - 01/17/2003 09:20 AM - Chad Berkley**

monarch can now be configured at install time to either get pipelines and steps
from metacat or off disk.  there is a property in the build file called
"pipelineLocation" that can be set to either "disk" or "metacat".  if it is set
to disk, monarch looks for pipelines and steps in the "pipelinedir" directory.
if it is set to "metacat" it looks for them at the "metacat" location.
