Bugzilla-Id:	96		

Description

The browse function in marineServlet needs to be implemented in a way that allows the browsing by different fields. Currently it is a simple query that returns all documents in the database and displays them like any other document. This task is open to further discussion about functionality and implementation.

History

#1 - 09/17/2001 10:15 AM - Matt Jones

This bug is obsolete. Changed the way query in metacat works.
