

EML - Bug #960

parser not correctly parsing <describes> tag in additionalMetadata

01/23/2003 09:19 AM - Chad Berkley

Status:	Resolved	Start date:	01/23/2003

Target version:	EML2.0.1	Spent time:	0.00 hour
Bugzilla-Id:	960		
Description			
Dan Higgins pointed out to me that the example eml document in lib/sample has a describes tag that points to a dataset tag in the document. the ids appear to be valid but the parser says that the "describes tag must point to a valid element".			

History

#1 - 01/23/2003 10:00 AM - Chad Berkley

Dan updates this with the following:

I told you yesterday about a problem I had with the eml2 file "eml-datasetWithCitation.xml" in the test directory. When it is placed into the references parser, there was an error message about not being able to find the reference in the 'describes' tag. When I remove all white space between the beginning and ending <describes> tags, that problem goes away. You probably need a 'trim()' in the code!

#2 - 06/14/2004 10:53 AM - Saurabh Garg

I checked both files mentioned in the bug.
lib/sample/eml-sample.xml
and test/eml-datasetWithCitation.xml

I was able to parse both of them without error. So maybe this bug is already fixed. If I dont hear from anyone, then I will close it as WORKSFORME

#3 - 06/17/2004 09:50 AM - Saurabh Garg

Closing as not able to locate the problem.
