

Monarch - Bug #975

monarch needs to be able to handle files not on metacat

Description			
Need to create an interface to handle datasets and streams that are not on metacat. Right now, monarch requires that the data to be processed resides on metacat but it doesn't have to. Just need to add an action to the servlet to use multipart encoding to upload a file and put it in the cache and return an xml description of the item as it exists in the cache.

There is now an action called insertcacheitem which allows the multipart encoded uploading of files to monarch. It can accept a zip file or a single file and will process it according to the rules in DataItemCache. It returns a manifest with the same xml format as the manifest that is returned when a pipeline is executed. When you get the manifest back, it can be used to access the files via the cache id of the inserted item.
